AI Camp Inc.
Data Science Dept
Palo Alto, CA

Dear Hiring Manager at AI Camp,

Please accept my application for the position of a Data Science Instructor or Intern, as I found advertised on Handshake. I am a sophomore at Claremont McKenna College set to graduate May of 2024 with a B.A in Data Science. I think that a position with AI Camp would give me the best opportunity to succeed and learn in a professional environment.

As a woman in stem and as an undergraduate student, I have taken a diverse amount of science, mathematics, engineering, and technology classes that have given me the necessary skills that can be applied to a Position. I am very motivated to succeed and will work tirelessly to get the job done, which I know will help me do well at your company. In my past work experience, I have obtained the expertise of efficiently working with fellow coworkers and heads of different departments, as well as enrich my stem skills, analyzing data, data management, and problem-solving skills. I have also had to complete multiple tasks to accomplish company objectives, allowing me to effectively and efficiently complete project initiatives. My knowledge in these areas, my determination to face challenges, as well as my passion to learn would make me a perfect candidate at AI Camp.

During the summer of 2021, I gained experience in both Engineering and Data Science working at a popular game developing company. I was given the independence to take on several large projects during a critical period in which Roblox China, also known as LuoBu, was first released. I was involved in data management and analysis and contributed to several projects on the engineering team. Through this experience I was able to gain knowledge and skills in SQL, EQL, building a data pipeline, JavaScript, Python, and game development. In addition to this, I have taken several math and programming classes that have sharpened my skills with languages such as Python and R. With this knowledge, I feel I can adapt to a working environment and utilize these skills in a Data Science instructor or intern position.

I look forward to discussing my qualifications with you soon in person or over the phone. I can be reached at (347) 751-4089 or via email at sfullerton24@cmc.edu. Thank you for your time and consideration!

Yours Truly,

Sarah Fullerton
